

E6 High Voltage Distribution Box

Overview

MCLASS Enclosures are engineered to house FlexPower power management boards alongside Mercury Security access panels in one compact, secure UL294 listed system. The E6M / E6M1 enclosures cover a door count from eight to sixteen with dual voltage distribution and network monitoring. High Voltage Power Distribution Units (HV PDUs) are critical components in modern electric and hybrid platforms. Our portfolio of HV PDUs enables controlled power flow. The High Voltage Power Box combines the functionality of an Onboard Charger (OBC), a DC/DC converter and a PDU (Power Distribution Unit). It converts the energy from the network grid AC (Alternative Current) source to DC (Direct Current). High voltage distribution box is the control part of EV power supply, which has the functions of power distribution, current measurement, short circuit protection, charge and discharge control, pre-charging, manual emergency stop and insulation testing port. Airports, Oil/Gas and petrochemical refining, waste water treatment, mining, wind farms and renewable energy sites.
