

Experimental Scheme for Fiber Optic Sensor Velocity Measurement

Overview

This paper describes optical fiber-based velocity measurement in the velocity range of approximately 0–7 m/s with an error of approximately 10% compared to a hot wire anemometer and a new method for simultaneous temperature and velocity measurements. 56 mm pitch along an optical fiber). The developed method uses the same principle as a hot wire anemometer, where the velocity perpendicular to an optical fiber is estimated as a function. We put forward a new fiber optic sensor for measuring linear velocity with picometer/second sensitivity with Weak-value amplification based on generalized Sagnac effect [Phys. The generalized Sagnac effect was first introduced by Yao et al, which included the. ANSYS-CFX V2020 R2 software was used to model the strain encountered by the fibers under various flow rates to assess the performance of the FBG sensors. The calculations and actual data exhibited good convergence, demonstrating the accuracy of the FBG sensors in determining water velocity. This sensor is composed of two optical-fiber laser guides and an optical-fiber-array spatial filter consisting of linearly arrayed.

Article Content

The design of a new fiber optic sensor for measuring linear velocity ...

TL;DR: This work presents an overview of progress and developments in the field of fiber optic sensor technology, highlighting the major issues underpinning recent research and illustrating a

Optimizing Algorithm for Existing Fiber-Optic Displacement Sensor ...

This paper describes the optimal design of a miniature fiber-optic linear displacement sensor. It is characterized by its ability to measure displacements along a millimetric range with sub-micrometric

Development of Measurement Method for Temperature and Velocity

This paper describes optical fiber-based velocity measurement in the velocity range of approximately 0–7 m/s with an error of approximately 10% compared to a hot wire anemometer and

Distributed viscosity and flow velocity measurements using a fiber ...

This works because flow velocity and fluid viscosity directly translate to a shear stress and consequently to a tensile strain on the fiber optic cable. Using the technology of fiber-optic distributed

An Integrated Interferometric Fiber Optic Sensor Using

An integrated interferometric fiber optic velocimetry sensor has been proposed and demonstrated at the central wavelength of 638 nm. The sensor is

Fiber-optic sensor for distance and velocity measurements using

A fiber-optic sensor for distance and velocity measurements is described which is based on dynamic properties of speckles formed by two illuminating laser beams. This sensor is composed of two

Investigation on Sensor Layout of Optical Fiber Distributed Acoustic ...

To address these issues, this study employs distributed optical fiber sensors (DOFSs) for measuring flow velocity in water-filled pipes, and the effectiveness is validated by the fiber Bragg grating (FBG)

Seal whisker-inspired fiber-optic sensor for high-resolution flow ...

Inspired by the exceptional hydrodynamic properties of seal whiskers, we develop a biomimetic streamlined optical fiber flow velocity sensor.

An Integrated Interferometric Fiber Optic Sensor Using

Three velocity measurement experiments are carried out to measure the velocity, and the experimental data shows that the velocity increases linearly

Investigation on Sensor Layout of Optical Fiber Distributed Acoustic ...

The influence of different sensor layouts of the distributed optical fibers on the monitoring data is also carefully checked, and the testing results show that bonding the optical fiber on the pipes can

(PDF) Design and Development of Fiber Optic Sensor

The comparison between modeling and experimental results shows the appropriateness of the eddy current speed sensor for the speed

The design of a new fiber optic sensor for measuring linear velocity ...

By using a different scheme to perform the Sagnac interferometer with the probe in momentum space, we have demonstrated the new weak measure protocol to detect the linear

Fiber Optic Sensors: Short Review and Applications

Abstract and Figures An extensive review of optical fiber sensors and the most beneficial applications is presented in this chapter.

(PDF) Pulse Wave Velocity Measurement With

The paper presents an approach to noninvasively measure pulse wave delay and velocity by means of two multiplexed fiber-optic Fabry-Perot

Optical fiber sensor for water velocity measurement in rivers ...

In this work, optical fiber Bragg grating sensors were used to measure water velocity and examine how it was distributed in open channels. Several types of coatings were incorporated into the ...

The design of a new fiber optic sensor for measuring linear velocity ...

We put forward a new fiber optic sensor for measuring linear velocity with picometer/second sensitivity with weak-value amplification based on generalized Sagnac effect

Optical fiber sensor for water velocity measurement in rivers and ...

In this work, FBG fiber optic sensors for measuring water velocity using two different coatings were theoretically analyzed and experimentally developed, one of which was especially hardened to

CHAPTER 09 FIBER OPTIC SENSORS

communication system via using fiber optics there was a great demand to measure and sense the rate of data transmission, change in phase, intensity, and wavelength and in the case of incentive

Determination of flow velocities using fiber-optic temperature ...

A fiber-optic cable as flow sensor introduces the opportunity to build a several meter long distributed flow sensor for boreholes and other flow-measurement applications.

Experimental studies of fiber-optic systems for measuring the velocity ...

To conduct experimental studies of a fiber-optic system for measuring the fluid flow velocity, a methodology for conducting experimental studies of mock-up samples has been developed.

Fiber optic sensor for flow and viscosity measurement

A sensitive fluid viscosity and flow measurement device using optical intensity based sensing is presented. The sensing principle makes use of the damping characteristic of a vibrating

The design of a new fiber optic sensor for measuring

Our results show our scheme with weak-value amplification is effective and feasible to detect linear velocity with pico meter/second sensitivity

Development of Measurement Method for Temperature

We have developed a new method for measuring temperature and velocity at a high spatial resolution (minimum 2.56 mm pitch along an optical

Pulse Wave Velocity Measurement With Multiplexed Fiber Optic Fabry ...

The paper presents an approach to noninvasively measure pulse wave delay and velocity by means of two multiplexed fiber-optic Fabry-Perot interferometric sensors interrogated by means of spectral

Special Issue "Fiber Optic Sensors and Applications": An Overview

We present here the recent advance in exploring new detection mechanisms, materials, processes, and applications of fiber optic sensors. Keywords: fiber optic sensors, detection mechanisms, materials,

Method for simultaneous measurement of velocity and direction of fluid ...

This article presents a fiber-optic method for measuring the velocity of a liquid flow, taking into account the flow direction. The proposed method is based on the use of an optical fiber with an
