

Huijue Router Connected to Fiber Optic Cable

AI Overview

To connect a Huijue router to a fiber optic network, you need an ONT, compatible Ethernet connections, and proper configuration through the router's admin panel.

Required Components

- Optical Network Terminal (ONT):** Converts fiber optic signals into Ethernet for your router. Typically provided by your ISP.
- Huijue Router:** Ensure it supports fiber connections via WAN or SFP ports. High-speed models maximize fiber performance.
- Fiber Optic Cable:** Usually single-mode with SC/APC or SC/UPC connectors.
- Ethernet Cable:** Cat6a or higher recommended to connect the ONT to the router.

Step-by-Step Connection

- Locate the Fiber Outlet:** Identify where the ISP's fiber line enters your premises.
- Connect Fiber to ONT:** Plug the fiber optic cable into the ONT's designated port. Ensure a secure connection to avoid signal loss.
- Power ON the ONT:** Wait 2-5 minutes for the status lights to stabilize.
- Link ONT to Router:** Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the Huijue router's WAN port.
- Power ON the Router:** Confirm the router's indicator lights show a successful connection.

Router Configuration

- Access Admin Panel:** Open a browser and enter the router's IP address (commonly 192.168.1.1 or 192.168.0.1).
- Input ISP Credentials:** Enter the username and password provided by your ISP if required.
- Update Firmware:** Ensure the router firmware is current for optimal performance.
- Configure Wi-Fi:** Set a secure password and customize your network name for security and convenience.
- Optional QoS Settings:** Enable Quality of Service if you use VoIP or video conferencing to prioritize traffic.

Advanced Considerations

- Fiber-to-Ethernet Converters:** If your Huijue router lacks direct fiber input, a fiber media converter can bridge the connection.
- Modular FTTX Systems:** Huijue offers modular solutions for larger deployments, integrating temperature control, power supply, an...
