

# Indoor installation price of household electrical distribution box

## AI Overview

A standard indoor electrical distribution box for a typical home costs between \$100 and \$2,500, depending on size, material, amperage, and installation complexity. Cost Breakdown

1. Basic Junction Boxes: Small indoor plastic boxes: \$10–\$60 for the unit alone, ideal for simple wiring projects or minor retrofits. Metal boxes: \$20–\$150, offering greater durability and protection, suitable for workshops or areas with higher impact risk.
2. Full Indoor Distribution Panels: Standard 100–125A indoor panels: \$1,200–\$2,500 including labor, materials, and permits. Higher-capacity panels (200A) or complex upgrades: \$3,000–\$6,000, often including new meter sockets, breakers, and rewiring.
3. Material and Component Influence: Plastic enclosures are budget-friendly but less durable. Powder-coated steel or stainless steel enclosures increase cost but provide long-term reliability. Adding high-quality breakers, surge protectors, or busbars can significantly raise the price.
4. Labor and Installation: Professional installation typically ranges \$100–\$300 for simple junction boxes and \$1,300–\$1,800 for full panel replacements. Labor hours vary from 6–18 hours depending on panel type, wiring complexity, and accessibility. Regional differences, permit fees, and potential structural adjustments can add 5–20% to total costs.
5. Additional Considerations: Weatherproofing, tamper-resistance, or deeper boxes can increase costs by 30–60% compared to standard indoor plastic boxes. Retrofits in older homes may incur extra costs due to hidden wiring issues or conduit rerouting.

Summary For a typical household indoor electrical distribution box: Small plastic box: \$10–\$60 (unit only) Metal indoor box: \$20–\$150 (unit only) Full 100–125A panel replacement: \$1,200–\$2,500 (parts + labor) High-capacity or complex upgrades: \$3,000–\$6,000

Choosing the right box depends on amperage needs, material preference, and whet...
