

Installation of 18-channel centralized power distribution box

AI Overview

An 18-channel centralized power distribution box provides stable 12V DC power to multiple devices, with individual channel protection and surge safeguards for reliable operation. Overview An 18-channel power distribution box is designed to centralize power for multiple CCTV cameras or security devices, eliminating the need for multiple adapters and reducing clutter. Each channel typically has individual fuse protection, LED indicators for status, and built-in surge and short-circuit protection to safeguard connected equipment. Installation Steps Power Off: Ensure the main power switch is in the "OFF" position before starting installation. Mounting: Secure the metal enclosure to a wall or rack using screws. The lockable design protects internal components from tampering. AC Input Wiring: Connect the L (live), N (neutral), and GND (ground) lines from your AC power source to the input terminals of the box. Device Connections: Connect each CCTV camera or device to the corresponding 12V DC output channel. Each channel has a PTC fuse and LED indicator to show operational status. Power On: Turn the main switch to "ON". Verify that the LED indicators for each channel are lit, confirming proper power delivery. Close and Secure: Close the cover and lock it to prevent unauthorized access. Safety and Protection Features Individual Channel Protection: If one device experiences a fault, only that channel is affected, while others continue operating normally. Surge and Lightning Protection: Protects connected devices from voltage spikes. Automatic Short-Circuit and Overload Protection: The system enters protection mode during faults and resumes normal operation once resolved. Durable Enclosure: Metal casing provides physical protection and helps prevent environmental damage. Best Practices Ensure proper ventilation around the box to prevent overheating. Use appr...
