

Is fiber optic cable considered a cable or an electrical wire

Overview

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry light. A TOSLINK optical fiber cable with a clear jacket. These cables are used mainly for digital audio connections between devices. Optical cable Communication cable is a certain number of optical fibers in accordance with a certain way to form the cable core, the outer sheath, and some are also covered with an outer sheath, to. A optical cable is is a kind of communication cable that is used to realize optical signal transmission. Generally, products with fewer cores, small product diameters, and simple structures are called wires, those without insulation are called bare wires, and the others are called cables; The conductor with a larger cross-sectional area (greater.
