

Optical Cable Traction and Laying Machine

Overview

Optical cable traction machines are widely used in optical fiber communication, power, and municipal engineering for cable laying and construction. They can lay up to 288-core optical cables in underground, overhead, or pipeline scenarios, with automatic pre-tension adjustment to prevent damage. Delivery time depends on order quantity. Designed with a humanized appearance, the machine is easy to move and transport. One person can operate the machine, which is equivalent to the labor of 4-5 people, saving time, effort, and labor costs, greatly reducing the project cycle and production costs, and ensuring convenient and efficient fiber optic. Find reliable fiber optic cable pulling machines for efficient cable management. 6mm steel stranded wire, 4*35mm² cable. It is used for long distance transmission of large section cable, especially suitable for long distance laying of various types of cables such as tunnel, pipe row, directly.
