

Price of Fireproof Sealed Metal Cable Trays

AI Overview

The price of metal sealed fire-resistant cable trays varies widely depending on material, fire rating, size, and supplier, typically ranging from \$50 to \$200 per meter for industrial-grade options.

Factors Affecting Price

Material and Construction: Metal sealed fire-resistant trays are commonly made from galvanized steel, stainless steel, or aluminum, often with powder-coated or intumescent fire-resistant coatings. Galvanized steel is strong and cost-effective, stainless steel offers corrosion resistance, and aluminum is lightweight but may be more expensive.

Fire Rating: Trays are rated for fire resistance, often 60, 90, or 120 minutes, with higher ratings increasing cost. Some premium trays, like those with WS5X classification, can withstand up to 1050°C for 2 hours, which adds to the price.

Size and Load Capacity: Standard lengths are usually 3 meters, with widths around 150mm and load ratings of 10kg/m on a 1.65-meter span. Larger or reinforced trays for heavy-duty applications cost more.

Surface Treatment: Options include electrostatic powder coating, electro-galvanizing, hot-dip galvanizing, and anodizing, which affect durability and price.

Supplier and Customization: Prices vary by supplier, order quantity, and customization. Suppliers with verified certifications, long industry experience, and high-quality production lines may charge a premium.

Typical Price Range

- Standard industrial metal trays: \$50–\$100 per meter
- High fire-rated or heavy-duty trays: \$120–\$200 per meter
- Custom or specialized finishes: Prices may exceed \$200 per meter depending on specifications and shipping.

Additional Considerations

- Ensure compliance with UL, BS, IEC, ISO 834-1, EN 1363-1, DIN 4102-12, or AS/NZS 3013:2005 standards.
- Consider low smoke, halogen-free (LSZH) coatings for enclosed public spaces or data centers.
- Verify supplier reliability, production...
