

Safety Instructions for Distribution Boxes

AI Overview

Ensuring the safe operation of distribution boxes involves proper installation, protective devices, environmental management, and physical safeguards to prevent electrical hazards and equipment damage.

Installation and Placement Distribution boxes should be installed in dry, ventilated areas, away from flammable, explosive, or corrosive substances, and at an ergonomic height of 1.2–1.5 meters for easy access and visibility. For construction sites, the main distribution box should be close to the power supply, with power and lighting circuits separated or clearly organized within the box. Proper site surveys and load calculations are essential to select the correct size, model, and quantity of distribution boxes.

Protective Devices Distribution boxes must include circuit breakers, fuses, leakage protectors, and surge arresters to prevent overloads, short circuits, and electrical leakage. Leakage protectors should have rated action currents and times appropriate to the environment: for wet areas, a maximum of 15 mA and action time under 0.1 seconds is recommended. High-quality, low-resistance components reduce heat accumulation and extend equipment life.

Environmental and Thermal Management Excessive heat can degrade insulation and damage components. To mitigate this, distribution boxes should have louvered vents for air convection, be made of heat-reflective materials like stainless steel, and be positioned to avoid direct sunlight. Overloading should be avoided, especially during high-temperature periods, and internal wiring should be organized to improve heat dissipation.

Physical Safeguards To prevent accidental contact or operation, lockable enclosures, transparent polycarbonate shields, and spring-loaded covers are recommended. Color-coded panels and tactile warning strips around high-voltage areas provide visual and physical cues for technicians. Proper mounting and rigid guards reduce the risk of accidental tripping or contact with live components.
