

Single-fiber optical module product introduction

Overview

Single fiber QSFP28 modules (commonly called BiDi transceivers) enable full-duplex 100G communication over a single optical strand. They do this by using Wavelength Division Multiplexing (WDM) to carry upstream and downstream signals at different wavelengths on the same fiber. Unlike traditional SFP transceivers that require two fibers—one for transmitting and one for receiving—a single fiber SFP uses. Juniper Networks® has platforms ranging from the Juniper Networks CTP Series Circuit to Packet Platforms, BX Series Multi-Access Gateways, E Series Broadband Services Routers, M Series Multiservice Edge Routers, MX Series 3D Universal Edge Routers, to the T Series Core Routers. These platforms. Currently, 100G optical modules are being deployed across a variety of scenarios. Among these different form factors, QSFP28 optical modules have emerged as the mainstream form factor for 100G optical. Single Lambda optical module is an innovative high-speed transmission module using single-wavelength technology, achieving speeds of up to 100Gbps on a single wavelength.
