

The circuit breaker in the house keeps tripping

AI Overview

If your circuit breaker keeps tripping, it could be due to several reasons:

- Overloaded Circuit:** Too many appliances on a single circuit can cause the breaker to trip.
- Short Circuit:** This occurs when a hot wire touches another wire or a ground wire, leading to a sudden surge of electricity.
- Ground Fault:** Similar to a short circuit, but it occurs when a hot wire touches a grounded surface, which can be dangerous.
- Worn-out Breaker:** An aging or damaged breaker may trip frequently and might need replacement.

Signs of Damage: Look for burn marks, heat around the panel, or a burning smell, which indicate overheating or wiring issues that need immediate attention. If the problem persists, it's advisable to hire an electrician to diagnose and fix the issue.
