

The optical module suddenly experienced significant light decay

Overview

Check the model of the faulty optical module. If it is not a Huawei-certified optical module, replace it with a Huawei-certified optical module. If the optical module is installed on a GE port, run the display interface `GigabitEthernet x/x/x` command to view port information when the optical module. An optical module is a critical component in modern optical communication systems, directly affecting transmission stability, network reliability, and operational efficiency. However, during installation and daily operation, various issues may arise. Even tiny imperfections scatter or block light, causing signal loss (attenuation), errors (BER increase), or. As a more sensitive optical device, optical modules sometimes have problems in the use process. Let's learn together! Problem 1: The optical port lamp does not light up after the two optical modules are interconnected Cause. The monitoring system is showing “ optical module failure,” and you are still staring at the error messages without a clue on how to resolve the situation. All of the SFP questions that have not been addressed and the QSFP troubleshooting problems clearly add up to managing so many support tickets.
