

The small busbar at the top of the cabinet is divided into

Overview

The busbar, as the main conductor for transmitting and distributing electrical energy in the power system, can be divided into main busbars and auxiliary busbars according to the current size and purpose. Among them, the small busbar at the top of the high-voltage cabinet, although small in size, plays a crucial role. Basic Definition of the Small Busbar at the Top of the High-Voltage Cabinet The small busbar at the top of the high-voltage cabinet, as the name suggests, is a small busbar device. The cabinet is divided into three mutually isolated sections: busbar room, functional unit room, and cable room, which can prevent the spread of accidents and facilitate live maintenance; The horizontal busbar is installed on the top of the cabinet, which is a three-phase five wire or three-phase. RiLine busbar systems for individual switchgear and controlgear up to 2100 A. Complete solutions for AC or DC applications. 3-pole, tool-free mounting, short circuit-resistant up to 65 kA, fully contact hazard-protected and with standard flat copper bars for global use. The cabinet body is made of bent steel plates, assembled with bolts after spraying.
