

Upgraded version of ODN passive device for relay protection

Overview

SIPROTEC 5, built on extensive field experience, offers comprehensive functionalities and device types for modern electrical energy systems. Its modular design and powerful DIGSI 5 engineering tool provide tailored solutions. Firmware updates represent an integral part of ABB's life cycle management of protection and control devices. The ideal time for a firmware update would be at device commissioning. R2 Wireless today announced a growing ecosystem of technology partnerships integrating its ODIN passive RF sensing platform across a wide range of autonomous systems, sensors and defense technologies. An Optical Distribution Network (ODN) serves as the bridge in a Passive Optical Network (PON), transmitting optical signals from the Optical Line Terminal (OLT) to the Optical Network Unit or Terminal (ONU/ONT), thus linking a service provider's core network to end-users (residential or business). Type B dual-homing protection refers to dual-channel redundancy protection for OLT or ORH PON ports and backbone fibers on a GPON network.
